1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 11, 12, 20 are rejected under 35 U.S.C. 102(b) as being anticipated by ZUKOWSKI et al. in U.S. Patent No. 4,926,423.

ZUKOWSKI et al. discloses a precoding-multiplexing circuit, comprises a precoding circuit (20), a time division multiplexer (35 and 23) and a time division demultiplexer (37) for multiplexing parallel precoded signals and demultiplexing binary data signals (see col. 4, line 12 to col. 6, line 51, col. 7, line 43 to col. 11, line 55) as in claims 1, 2, 11, 12, 20.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over COMINETTI et al. in U.S. Patent No. 4,887,269.

COMINETTI et al. discloses a differential encoder and decoder for encoding input binary data signals utilizing EXOR circuit(s), and D-type flip-flop or delay units (see col. 3, line 53 to col. 4, line 24, col. 5, line 42 to col. 6, line 8) as in claims 21-23. Although COMINETTI et al. fails to disclose the specific arrangement of EXOR circuit(s), and D-type flip-flop or delay units as claimed, it would have been obvious to one of ordinary skill in the art to implement to make the same invention as claimed since it is well known in the art to form a differential encoder with the uses of EXOR circuit(s), and D-type flip-flop or delay units in any desired configuration to fulfill the system specification and requirement.

7. Claims 3-10, 13-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kogo et al., Myers et al., Reisinger, Pachynski, Jr. And Townsend et al. are all cited to show the common feature of conventional time division multiplex transmission system utilizing logic gates similar to the claimed invention.
